

Welcome to Fast Reader

You're about to discover something surprising.

**You can read much faster
than you think.**

Most people read at 200-250 words per minute.
But your brain can process information much faster.

The bottleneck isn't your brain—it's how you were
taught to read as a child, sounding out words slowly.

Fast Reader removes this bottleneck by showing
you one word at a time, right where you're looking.

Press Space to pause • Use ↑↓ to change speed

How It Works

This technique is called RSVP

(Rapid Serial Visual Presentation)

Words appear one at a time in the same spot.

Your eyes don't need to move across the page.

Your brain processes each word instantly.

The orange letter marks the 'optimal recognition point'

—where your eye naturally focuses to read fastest.

Research shows people can read 400-600 WPM

with RSVP while maintaining comprehension.

That's 2-3x faster than normal reading!

Tips for Success

1. Start at a comfortable speed (300-400 WPM)
2. Gradually increase as you adapt
3. Don't worry if you miss a word—keep going
4. Your brain fills in gaps automatically
5. Practice for a few minutes each day
6. Try different types of content

Most people double their reading speed
within the first few sessions.

Ready?

This tutorial has been playing at 400 WPM.

Try increasing the speed!

Press ↑ or click the speed control.

See how fast you can go.

When you're ready, upload your own PDF
and start speed reading anything.

Happy reading!
